Implemented backend business logic and REST APIs for authentication and core application workflows. Connected React frontend with MongoDB for efficient data handling.	
RAMPeX Technologies	2025
Developed full-stack applications using Spring Boot and React.js, building RESTful APIs and responsive UI components. Integrated authentication and role-based access using Spring Security with JPA/Hibernate.	

SKILLS ACQUIRED:

Frontend : HTML, CSS, JavaScript, ReactJS, React Native, TailwindCSS, Bootstrap
Backend : Node.js, Express.js, Java, Spring-Boot, REST APIs, MongoDB, MySQL

PROJECTS

TrackOS - (Ongoing)	Github	January 2026
Tech Stack : Java (Spring Boot, JVM), eBPF, Hikari pool, Prometheus, Grafana, Loki		
TrackOS is a real-time rail slot allocation runtime built on in-memory scheduling across JVM and OS layers. It highly optimizes JVM execution by efficiently managing memory, schedulers, and thread-level concurrency.		
FoodDeliverApp	Github	August 2025
Tech Stack : Spring Boot, React.js, MySQL, Spring Security, JWT		
Built a full-stack food delivery application using Java and Spring Boot with role-based authentication and CRUD operations for users, restaurants, menus, and orders.		
Lead Management CRM	Github	March 2025
Tech Stack : ReactJS, Node.js, Microservices, MongoDB, RabbitMQ		
Built a CRM for admission lead tracking with individual applicant monitoring, category-based pipelines, role-based access control, Cloudinary uploads, and a microservices-based architecture using RabbitMQ for reliable inter-service communication.
